SATHVIK VK

Pre-seed & Seed AI Research

Bengaluru | sathvik@perfstaq.com | sathvikvk.pro

linkedin.com/in/sathvik-vk-b76090269

Profile

Founder/operator transitioning into venture, researching the founders turning AI capability into products customers rely on. Focus on memory and context infrastructure, reliable AI deployment and specific business workflows. Bring product building and commercial execution to public-source company analysis.

Selected research

Independent AI research portfolio | Reviewed 4 November 2026

- Researched 17 prospects across India, the UAE, Europe and the USA; separated an 11-company factual research pool from 6 verification holds for unresolved evidence.
- Track announced financing separately from current-stage assertions, and distinguish headquarters from operating presence. Preserve source conflicts and unknown values rather than inferring eligibility.
- Assess buyers, workflow pain, alternatives, model dependencies and delivery burden. Frame next diligence around task success, permissions, human review and willingness to pay.
- Separate company and investor claims from independently supported facts and analytical hypotheses. Record what evidence would change a view and keep editorial drafts distinct from published research.

Archive of public-source research

- Mapped 48 companies across AI infrastructure and DeepTech and prepared three screens covering Simplismart, C2i Semiconductors and CynLr.
- Built an illustrative CynLr Series B scenario model covering operating cases, valuation, dilution and downside. Historical research exercises used public sources; they did not involve deploying or managing institutional capital.

Founder experience

Founder, Perfstaq | Bengaluru

- Build and iterate AI products and workflow systems across product strategy, rapid prototyping and commercial experimentation.
- Work across product, AI tooling, go-to-market, sales and partnerships under startup constraints.
- Develop a workspace for business apps and AI-assisted actions with human approvals. The public product presents Sales, Sign, Calendar, Board, Today and Finance, with connected AI tools operating inside the workspace.
- Apply product iteration and customer discovery experience to questions about adoption, implementation effort and the gap between a demo and reliable use.

Product: perfstaq.com

Research methods and tools

Public-source research, market mapping, company screening, technology and commercial analysis, scenario modelling and decision review. Excel, Google Sheets, structured source registers and AI-assisted research workflows.
